Academic Projects

Title : AI - Enabled Predictive Maintenance System for Industrial Machines using IoT and Edge Computing
Platform : Python Duration : 2 Months
Description : AI-Enabled Predictive Maintenance System for Industrial Machines Using IoT and Edge Intelligence is a smart monitoring solution that collects real-time machine data through IoT sensors and analyzes it using machine learning algorithms at the edge. The system predicts potential equipment failures in advance, enabling timely maintenance, reducing downtime, and improving operational efficiency.

Title : Onboard Surveillance Camera Robotic Vehicle
Platform : C Duration : 6 Months
Description : Designed a robotic vehicle with face recognition camera and internet connectivity with Integrated multiple sensors for automated surveillance and Worked on hardware implementation and documentation.

Title : IoT Based Home Automation Security System:
Platform : Python Duration : 6 Months
Description : Developed a smart home automation system using IoT concepts with Integrated sensors for security monitoring and Enhanced home safety by integrating motion detection and alert mechanisms for unauthorized access.
